

RESEARCH & INNOVATION IN CSE

ABSTARCT

Dr. Arif Mahmud

Associate Professor & Associate Head

Department of CSE, Daffodil International University

ABSTRACT

- An abstract is a concise summary of a research paper or entire thesis.
- It is a well-developed single paragraph of approximately 250 (100-300 words, but there's often a strict word limit) words in length. The function of the abstract is to outline briefly all parts of the paper.
- A good abstract is short but impactful, so make sure every word counts.

WHAT TO INCLUDE

- 1. Reason for writing: What is the importance of the research? Why would a reader be interested in the larger work?
- 2. Problem: What problem does this work attempt to solve? What is the scope of the project? What is the main argument, thesis or claim?
- 3. Methodology: A scientific work may include specific models or approaches used in the larger study.
- 4. Results: A scientific work may include specific data that indicates the results of the project.
- 5. Implications: How does this work add to the body of knowledge on the topic? Are there any practical or theoretical applications from your findings or implications for future research?

WHAT TO AVOID

- 1. Excessive Length: Avoid verbosity and excessive length in your abstract.
- 2. Ambiguity and Vagueness: Clearly define your research objectives, methodology, and findings to avoid confusion.
- 3. Inclusion of Unnecessary Details: Focus on presenting the core elements of your study, omitting extraneous details that detract from the main message.
- 4. Overstating Findings: Present your results accurately and objectively, avoiding hyperbole or speculation. Misleading statements may erode the credibility of your research and undermine trust in your findings.
- 5. Neglecting Proofreading: Neglecting to proofread your abstract can result in errors or inconsistencies that detract from its quality. Take the time to review your abstract carefully, checking for spelling mistakes, grammatical errors, and formatting issues.

EXAMPLE

- Purpose – The factors that motivate generation-z individuals to use IoT for security purposes have yet to be explored. Therefore, the goal of this research is to close a research gap by verifying the protection motivation theory using gender as a moderator.
- Design/methodology/approach – We used a purposive sampling approach to collect data from Dhaka city in which 370 valid responses were selected. Additionally, the quantitative and cross-sectional survey employed a 7-point Likert scale. After that the evaluation approach included three phases: a measurement model, a structural model, and multi-group analysis.
- Findings –Vulnerability, self-efficacy, and response-efficacy were discovered to be critical predictors with a variance of 60.4%. Besides, there was a significant disparity between men and women in two relationships, response efficacy and response cost.
- Practical implications – This research expands our understanding of Gen-Z consumers' behavioral intentions to take measures against household threats, allowing preventative programs to be improved. Besides, in the case of applying coping strategies, a practical difference between males and females has been found that must be bridged through aware campaigns.
- Originality/value –This study has made a unique contribution to the information system literature. First, the role of PMT factors in addressing security concerns in homes utilizing IoT devices has been assessed. Second, coping evaluation process has a greater impact on users' intentions than the threat appraisal process. However, Males and females use slightly different approaches to defending themselves against the threat.
- Keywords: Burglary, IoT, moderator, PMT, generation-z

WRITING TIPS

- Make sure the abstract is written clearly and concisely.
- In the abstract, only describe your research's original contributions.
- Don't talk about other people's work.
- It is not necessary to include citations in an abstract.
- Maintain the word count.
- Add the keyword list at the bottom of the abstract.
- Completely revise the abstract after writing it and correct if there are any errors.
