

LITERATURE REVIEW

Dr. Arif Mahmud

Associate Professor & Associate Head

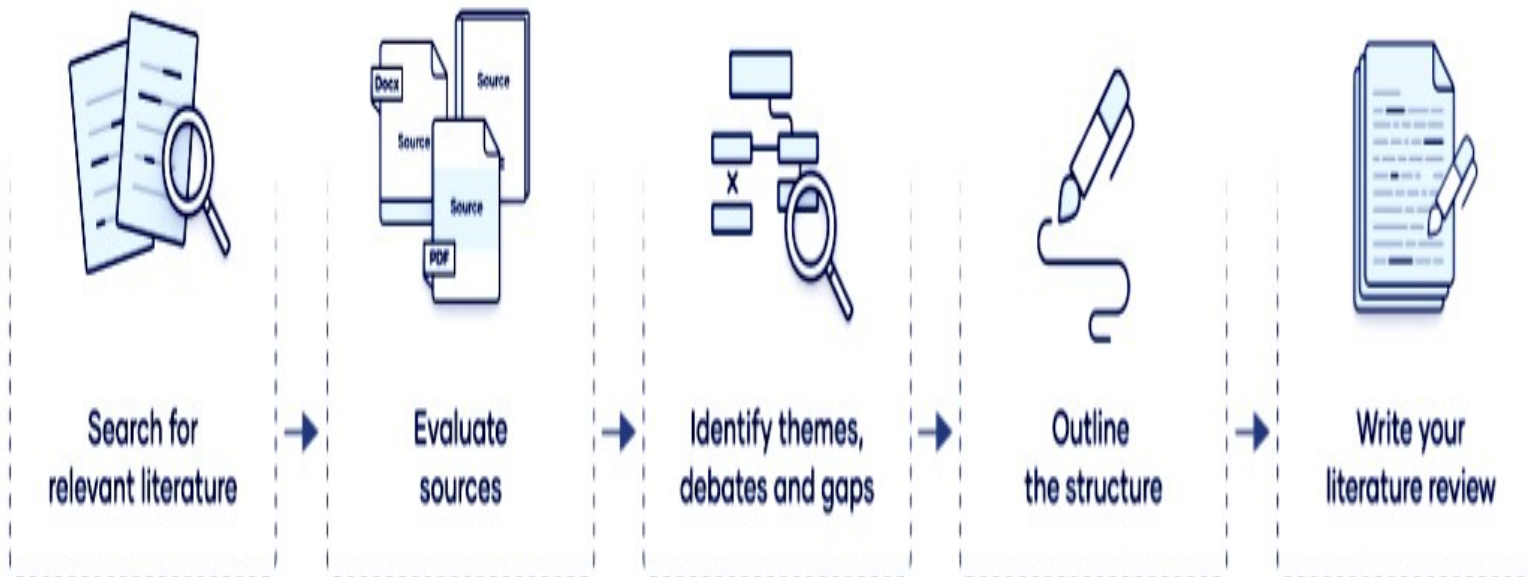

Department of CSE, Daffodil International University

LITERATURE REVIEW

- A critical analysis of existing research in your field
- It highlights both the strengths and weaknesses of existing research
- Allows you to gain a critical understanding of your field
- Opportunity to think about what has been done in your field
- Opportunity to think about the similarities, patterns, trends and also differences across the existing research
- By identifying strengths and weakness, you will be able to think about what needs to be done
- Establishes the gaps or inadequacies

LITERATURE REVIEW

STARTING TO THINK ABOUT YOUR OWN LITERATURE REVIEW

- Who are the key players in my field? This could be anything from academics, medics, governing bodies, schools of thought etc. (Sources!)
- What are the main ideas/debates in my field?
- How have these ideas changed over time?
- What are some of the problems with these ideas/debates? Is there a problem with the methodology?
- What are you going to do differently?

KEY PLAYERS AND SOURCES

- First stage of the literature review is to identify the key people in your field and collate all relevant sources about your topic.

- Ask yourself:

What research and theory is there on my topic?

What are the key sources on my topic?

Who are the main researchers in this area?

How has the topic been investigated over time?

GETTING STARTED: PLANNING THE REVIEW

- How will you organize the information?
 - Chronologically?
 - Thematically?
 - By trends/approaches/techniques?
 - Major debates/controversies?
 - Probably a combination of these

ILLUSTRATING TRENDS: SYNTHESIZING LITERATURE

- Avoid list-like structure by illustrating trends and patterns
- For example:

Research into thesis titles has emphasized the use of the colon to distinguish the thematic focus from the precise focus of the work (Smith, 1999; James, 2002; Webster, 2007; Helgesen, 2008).

USE OF CITATIONS IN THE LITERATURE REVIEW

- Two types of citations:
 - Integral: The author's name appears in the sentence.
 - Example (author-date system): Lillis (2001) argues that both tutors and students often lack explicit knowledge of the conventions governing the construction of academic texts.
 - Non-integral: The author's name appears outside sentence.
 - Example: Both tutors and students often lack explicit knowledge of the conventions governing the construction of academic texts (Lillis, 2001).

REVIEW SUMMARIZATION

Litrature Matrix

S.No	Authors /year	Title/Journal	Theories	DVs	IVs	Methodology	Findings	Significant Contribution	Recommendation / Gap

10									

GETTING STARTED: PLANNING THE REVIEW

- Chronologically?
- Thematically?
- By trends/approaches/techniques?
- Major debates/controversies?
- Probably a combination of these

EDITING AND PROOFREADING

- Editing and proofreading are fundamental aspects of good academic practice.
- Editing is the process of continually revising and improving your written work. It is often an activity that forms a major part of the writing process.
- Proofreading is the final check before printing and submission. It is a process that helps remove errors and improve presentation

EXAMPLE

- This research identifies six UTAUT 2-based papers that are as follows. First, Abushakra and Nikbin (2019) and Alkawsu et al. (2018) study IoT-based applications from entrepreneur and consumer perspectives. As per Abushakra and Nikbin (2019), entrepreneurs do not embrace IoT services when the procedures are not advantageous, convenient, and simple. Alternatively, new approaches and management strategies are required to improve the adoption rates among consumers (Alkawsu et al., 2018). In both cases, knowledge of the system has a high influence on the adoption intention.
- Furthermore, different age groups have different priorities, beliefs, and expectations for IoT-based systems. For example, those between 20 to 30 years of age bear more faith in non-profit and profitable companies, whereas the elder groups are discerned to have faith only in public organizations (Radenković et al., 2020). Similarly, personality-related issues with age have a significant impact on the adoption of RFID in healthcare (Chong et al., 2015). For this reason, different types of services are recommended in these studies, keeping the age groups and individual characteristics in mind.
